

1.

Given two statements:

- i) Insertion of an element at first position process should update with new first node address to the last node in a circular list.**
- ii) Deletion of an element from the last node process should update new last node with the first node of the circular list.**

- A. Both are true**
- B. Both are false**
- C. First is false and second is true.**
- D. None of the above**

Answer: A

2.

To insert an element at the beginning of a circular linked list, which statement is not applicable:

- i) The new node must be linked with the old head node.**
- ii) The last node in the circular linked list must be linked to the new node.**
- iii) The last node should be linked to NULL**
- iv) The head node must be reassigned with the new node**

- A. i**
- B. ii**
- C. iii**
- D. iv**

Answer: C

3.
Circular doubly linked lists can be implemented in

- A. Music and video playlists**
- B. undo/redo functionality.**
- C. other than none of these**
- D. None of these**

Answer: C

4.
Forming a ring unlike standard linked lists, they have no end or beginning is considered as

- A. Singly Linear Linked List**
- B. Doubly Linear Linked List**
- C. Circular LinkedList**
- D. One dimension Linked List**

Answer: C

5.
Which of the following statement is not a disadvantage of circular linked list:

- A. Circular list are complex as compared to singly linked lists.**
- B. Entire list can be traversed from any node of the list..**
- C. If not traversed carefully, then we could end up in an infinite loop.**
- D. Like singly and doubly lists circular linked lists also doesn't support direct accessing of elements**

Answer: B
